Data Subject Access Request

IBM

Interdependence of the Indonesia PDP Law with IBM Security

Strengthen data privacy protection, build customer trust and grow your business

Secure the User

Right of Access by the Data Subject, Right to Rectification, Right to be Forgotten, Right to Object, Supervise data processing parties, Prevent illegal access to personal data

[IBM Security Verify](#)

[IBM Security Trusteer](#)

Secure the Data

Pseudonymization and Encryption of Personal Data, Ensure Confidentiality of Personal Data, Data Subject Access Request (DSAR)

[IBM Security Guardium](#)

[IBM Security Discover and Classify](#)

Secure the Device

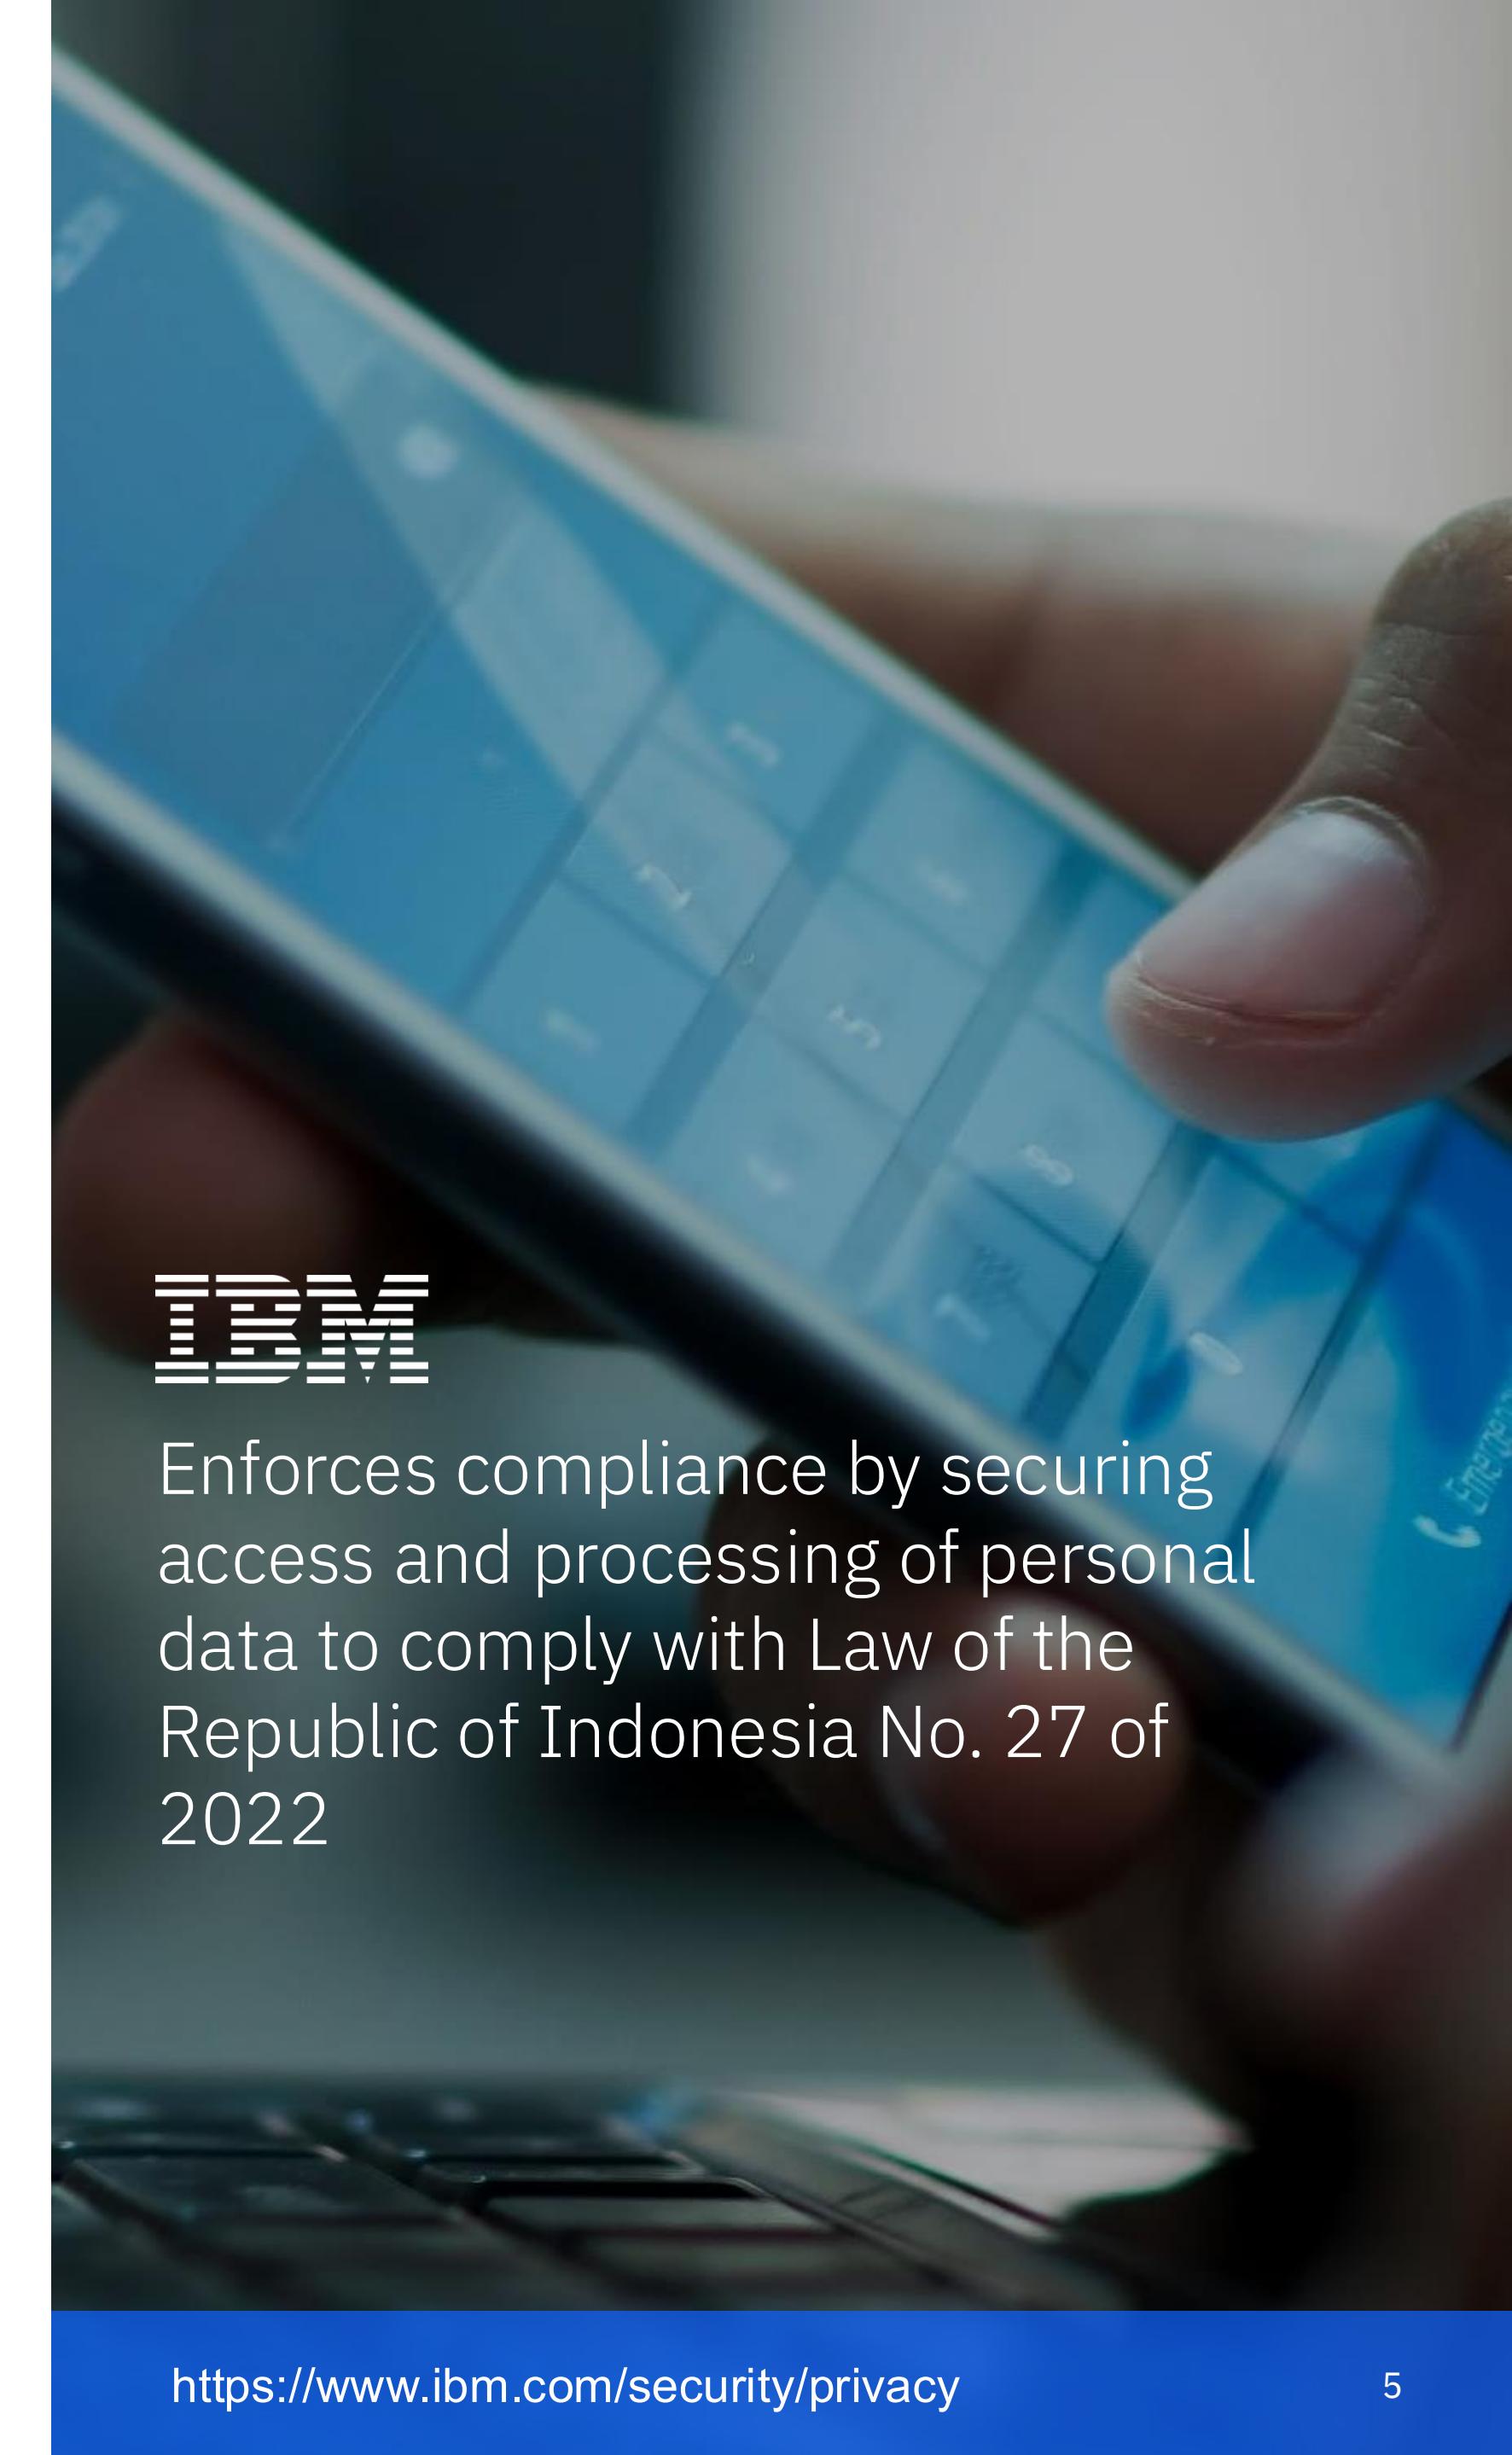

Technical measures to ensure a level of security appropriate to the risk of processing personal data

[IBM Security MaaS360](#)

Secure the Threat

Monitor and control the processing of personal data

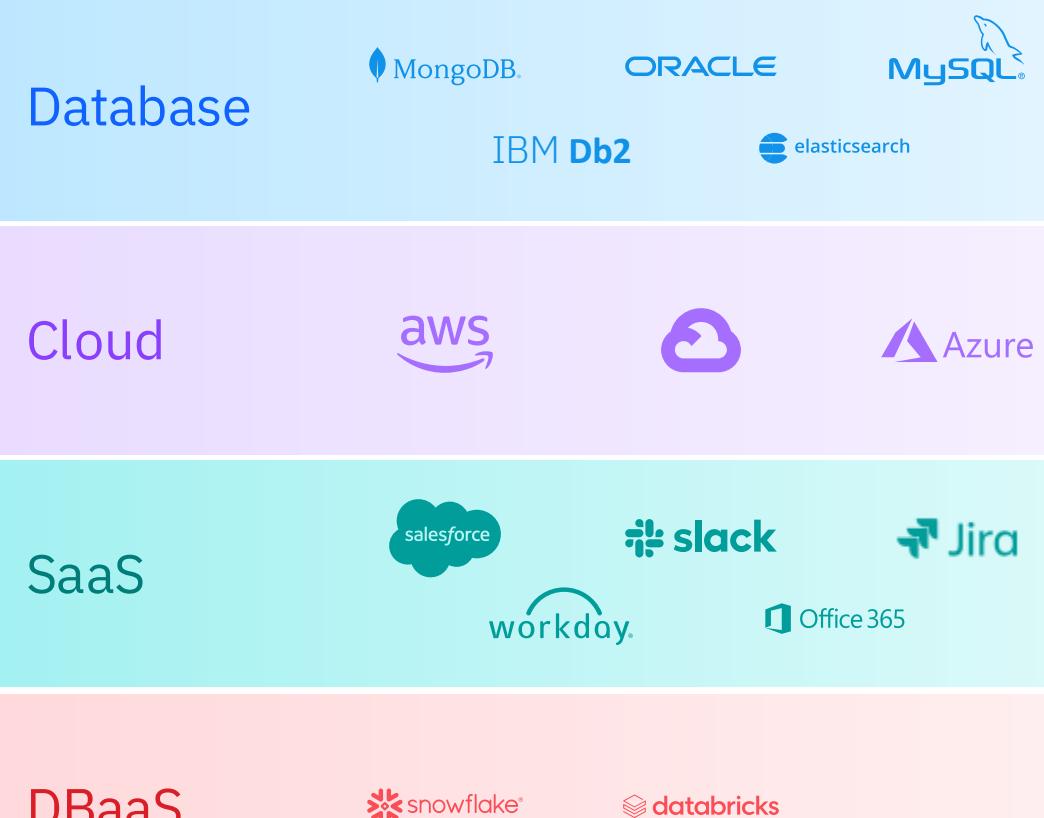

[IBM Security QRadar XDR](#)

Enforces compliance by securing access and processing of personal data to comply with Law of the Republic of Indonesia No. 27 of 2022

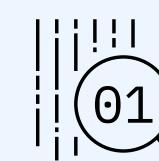

You can't secure what you don't know exists

Discover your sensitive data

Understand your data

Build an asset inventory

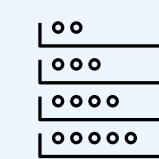

Discover structured & unstructured data

Classify how sensitive it is

Map to regulations and policies

Compile this to a central inventory

Explain data for compliance

Who and what is accessing your data?

What have they done, and what *can* they do?

Who has privileged entitlements to sensitive data?

What controls are in place on this data store?

When did this change take place and who performed it?

I can tell you

IBM Security Guardium

Discover

Automate discovery and classification of on-premises and cloud data and uncover critical vulnerabilities

Guardium
Discover and Classify

Encrypt

Safeguard privacy and confidentiality of data at rest, in motion, and in use with encryption and key management

Guardium
Data Encryption and Key Lifecycle Manager

Monitor

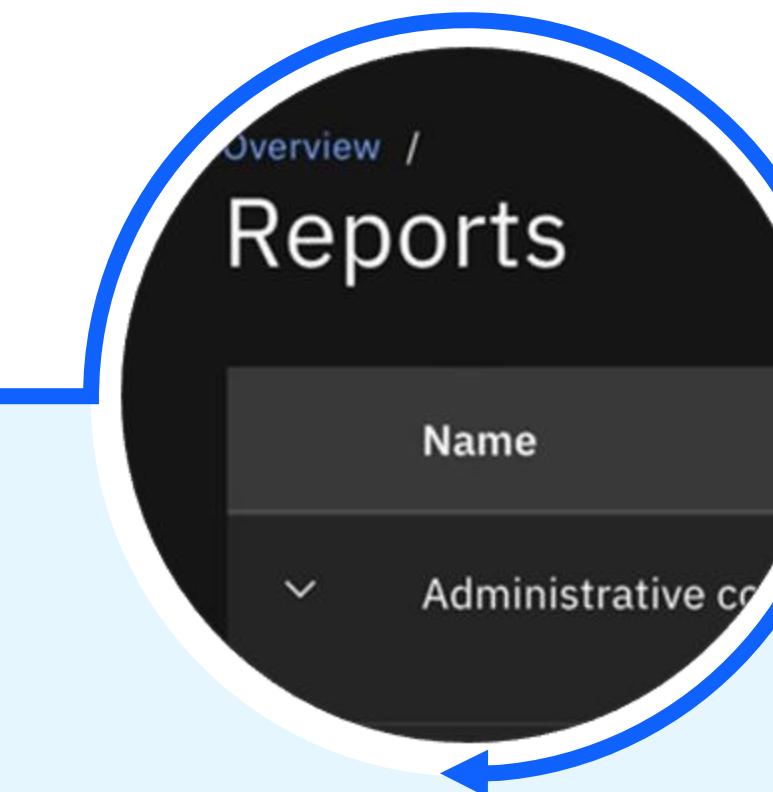

Protect and harden on-prem and cloud data sources, including Azure Event Hubs, AWS Kinesis, Snowflake, SAP, etc.

Guardium
Data Protection and Insights and Vulnerability Assessment

Analyze

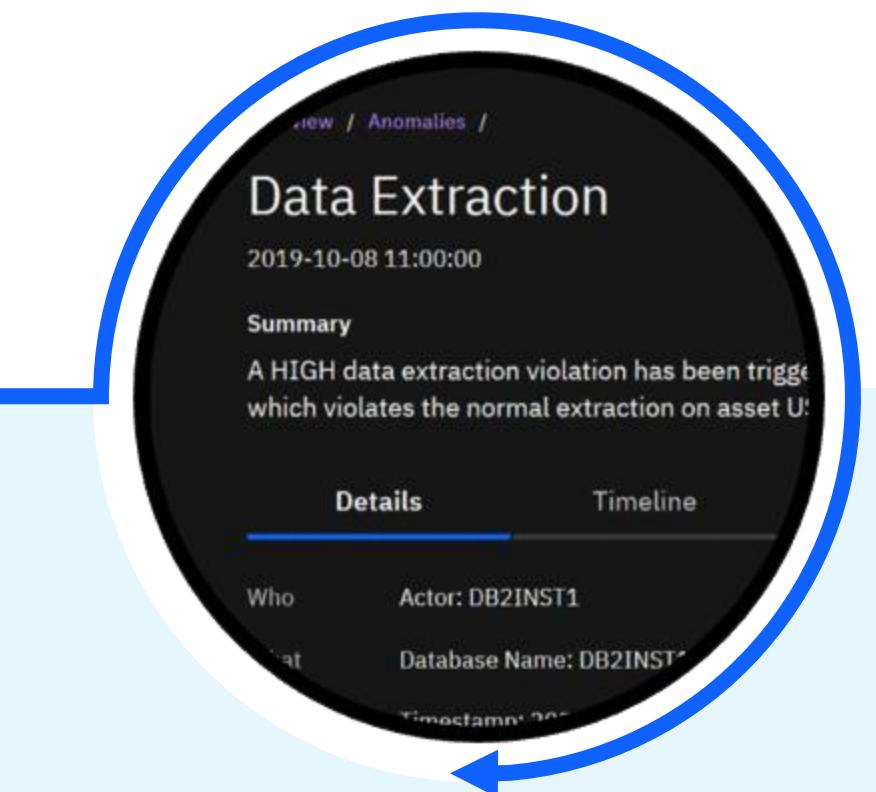

Generate reports and automate notification on long-term data activity within seconds, across the audit lifecycle

Guardium
Data Extraction

Respond

Identify and respond to compliance and data security risks, across environments and teams, from one place

Guardium
Data Extraction

IBM Guardium Discover and Classify

Uncover your sensitive data intelligence to speed up security, compliance, and privacy use cases

Identify unknown data at scale

A network-based approach to discover and map sensitive data, both at rest and in-motion

Automate insights, playbooks

Understand data subjects, data lineage, stakeholders, processes... then assess risk, assist breach investigations, speed compliance, and remove unnecessary PII

Classify sensitive data with AI

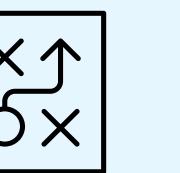

AI & ML classify both structured and unstructured data at the data element or repository level

Integrate with Guardium

Ready-to-use integration with Guardium Data Protection for stronger data classification, database monitoring, and vulnerability assessment

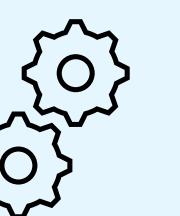

The screenshot shows the 'Inventory' section of the IBM Security Discover and Classify application. The left sidebar includes options for 'Data asset management', 'Repository management', 'Network mapping', and 'PII candidates'. Below the sidebar are dropdown menus for 'Inventa platform' and 'Settings'. The main area displays a table of data sources with columns for Type, Vendor, URL, Creation Date, and Next permissible window. The table lists various databases and an Amazon S3 bucket, each with a checkbox and a details icon.

Type	Vendor	URL	Creation Date	Next permissible window
>	Oracle	jdbc:oracle:thin:@//172.23.0.246:1521/XE	10.26.2021 12:01:43PM	-
>	DB2	jdbc:db2://172.23.0.245:50000/testdb	10.26.2021 12:04:40PM	-
>	MS SQL	jdbc:sqlserver://172.23.0.243	10.27.2021 01:40:47AM	-
>	MariaDB	jdbc:mariadb://172.23.0.141:3306/flat_1t_40_full	10.27.2021 01:47:20AM	-
>	Redshift	jdbc:redshift://redshift-cluster-dev-frk.co4iddl9u31p.eu-central-1.redshift.amazonaws.com:5439/dev	10.27.2021 01:49:05AM	-
>	Amazon S3	s3://	10.27.2021 01:49:45AM	-

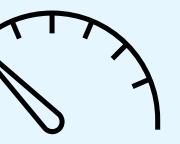

Data Aware Security

Enables clear protection by classifying data sources to prioritize data protection needs

Improve Efficiency

Significantly reduces false positives, which means analysts don't need to spend hours on them

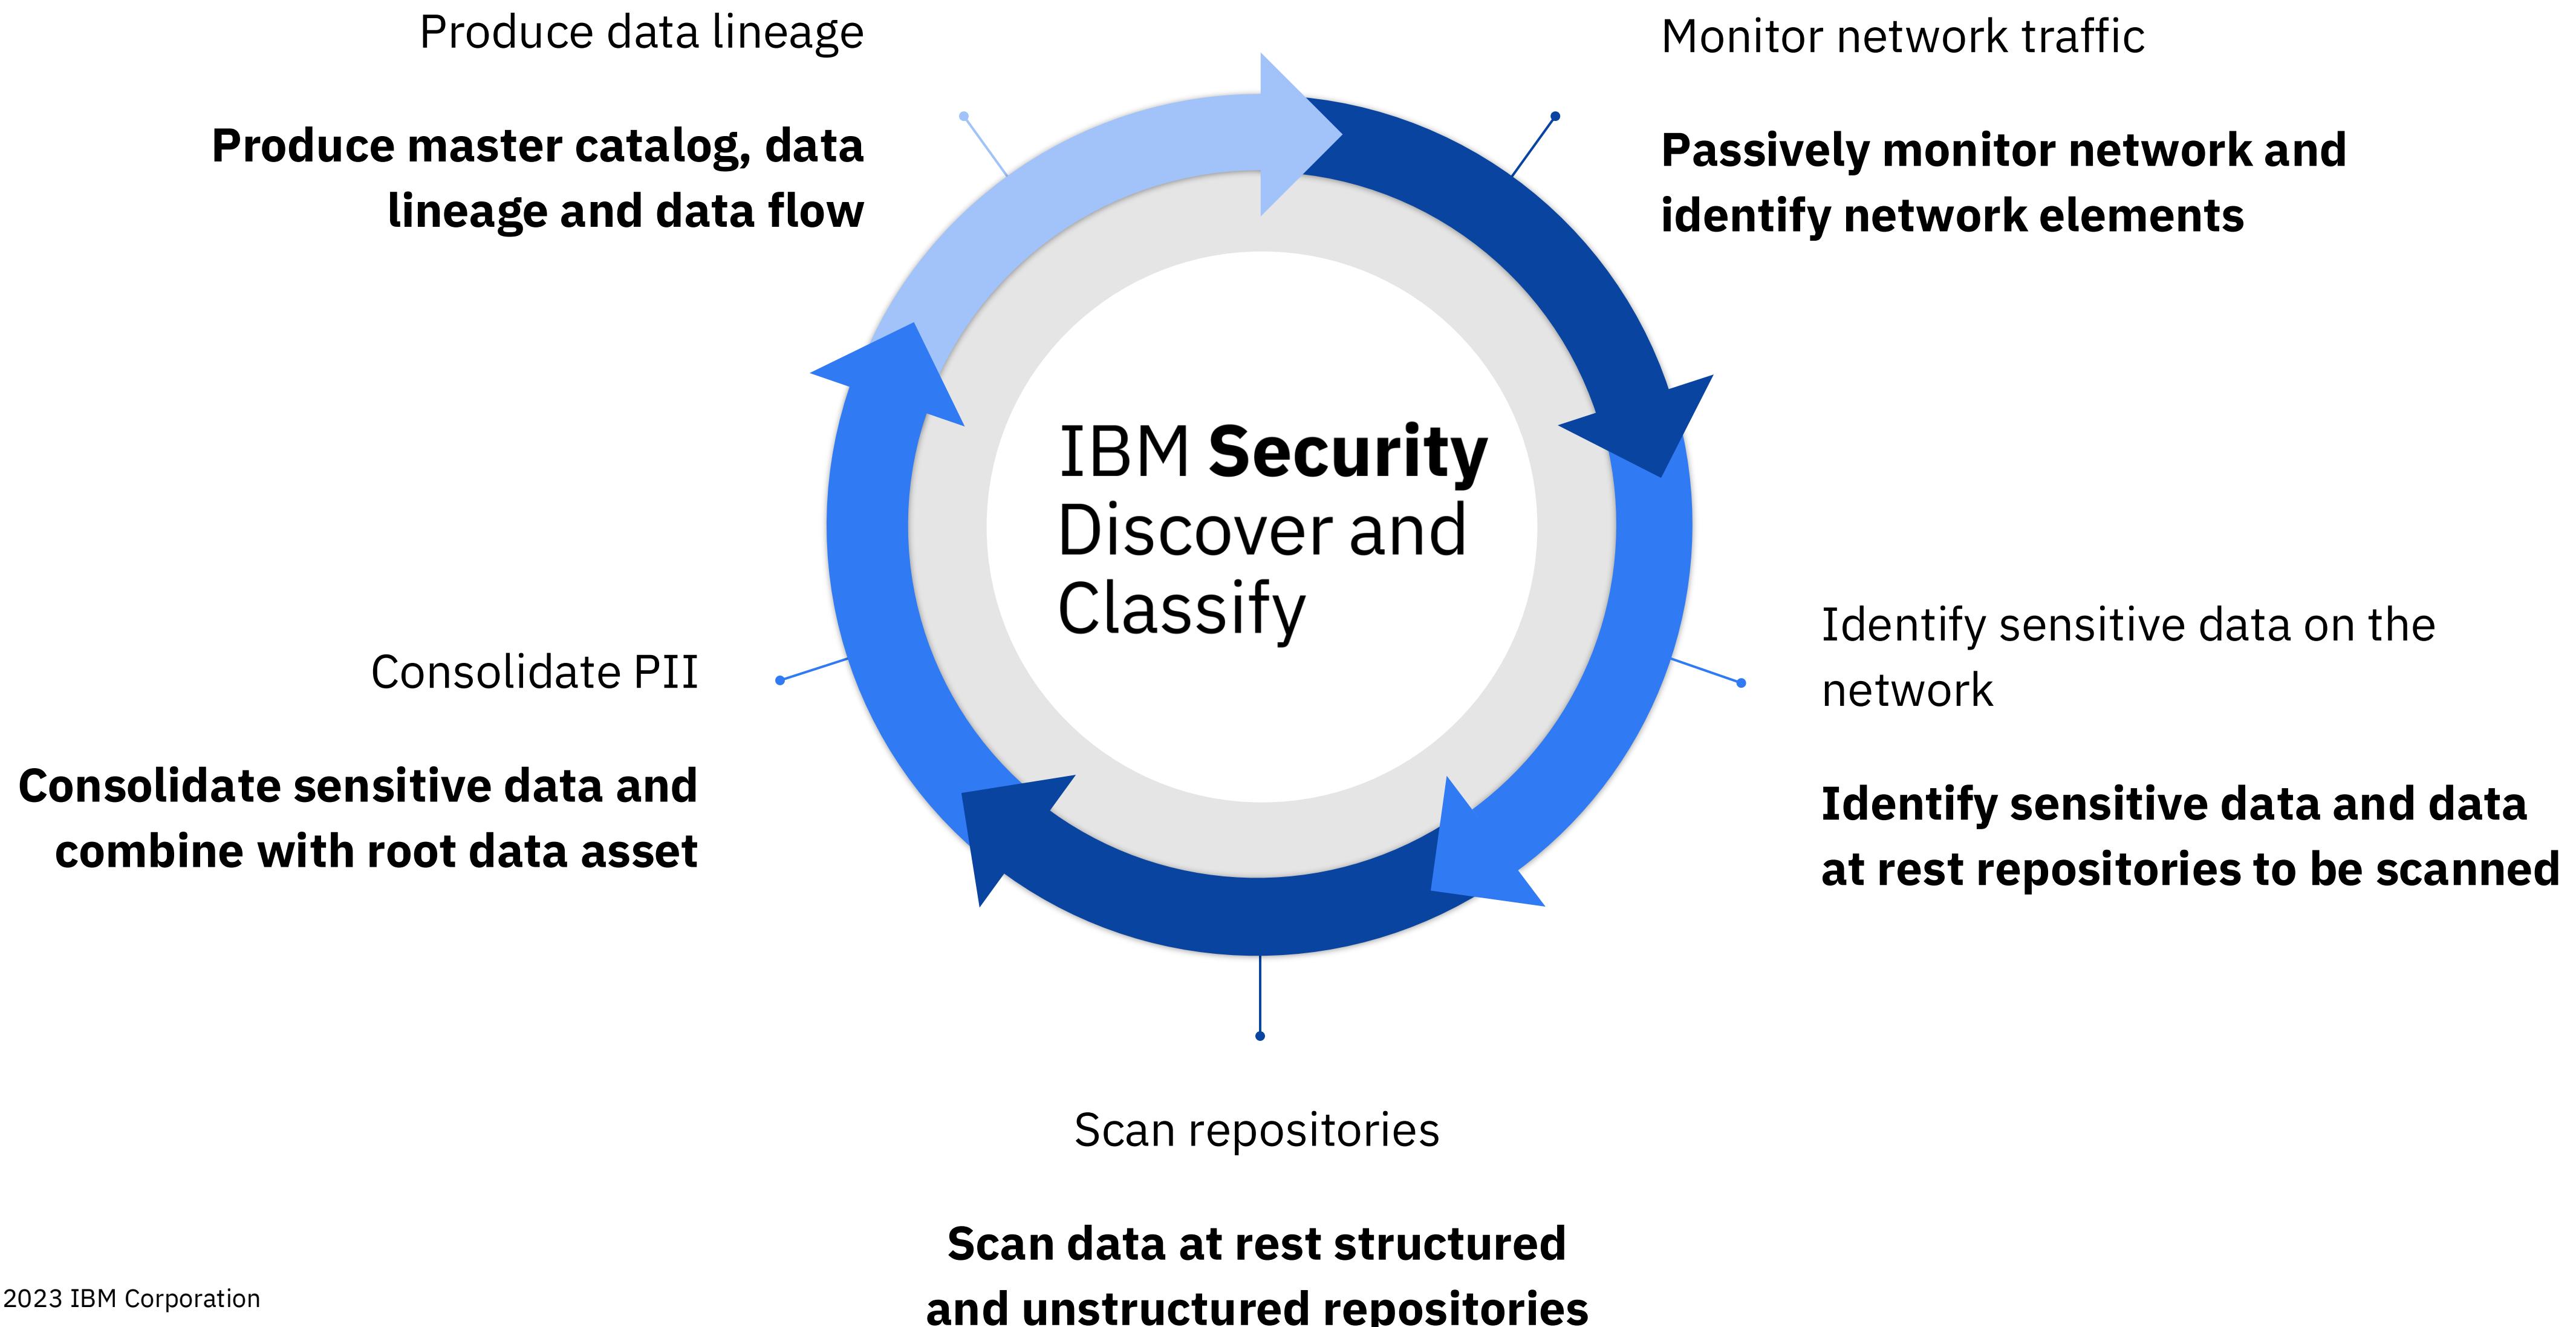

Reduce Risk

Improve risk posture by combining data classification, activity monitoring and vulnerability management

The screenshot shows a web browser window with a dark header bar. In the top left corner of the header, there are icons for back, forward, and search. The top center displays the URL "Not Secure — 169.60.204.105". On the far right of the header are icons for refresh, download, and other browser functions. The main content area is titled "Login" in a large, bold, black font. Below the title are two input fields: one labeled "Email" and another labeled "Password", both represented by light gray rectangular boxes. At the bottom of the form is a solid blue rectangular button with the word "Login" in white.
